# FIRETOKEN

## Decentralized Staking Program Instruction

---

### Introduction:

Welcome To FireToken community. Our staking program is enabled for all FireToken's holders immediately after distribution. This instruction will walk you through how to set up and participate in our decentralized staking process.

Our system is completely decentralized. Any ERC20 wallets such as MyEtherWallet can be used for staking FireToken. There is absolutely nothing you need to download and you may verify any ERC20 wallets of your choice on Github.

The staking reward is automatic, calculated based on a preset perimeter in conjunction with market condition to ensure a profitable and sustainable payout structure. Staking amount is subjected to changes, and maximum cap is not to be interpreted as expected amount or promise of standard delivery. Market condition can be volatile and unpredictable. This volatility is even more apparent in cryptocurrency trading market, due to its infancy stage. **Unanticipated market events may attribute to staking rate changes to ensure a sustainable payment model and a positive consistent growth of our community.**

FireToken is the first of its kind to offer true decentralized, democratic community based support, **renewable FREE voting utility** and adaptable across many platforms. FireToken also acts as a common currency, widely accepted in its network and with profitable volatility on the trading market.

---

---

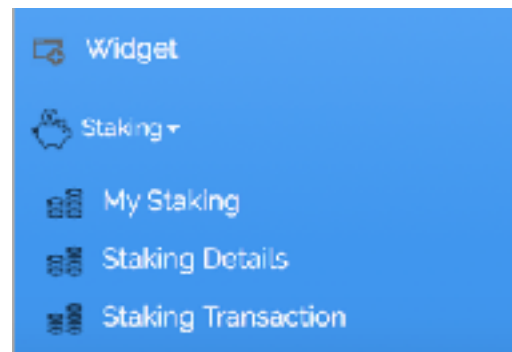

## STEP 1

Token holders will need to sign up for an account with FireToken to utilize our staking program. Visit <https://FireToken.io> to do so. Please verify that you are visiting the correct official webpage address to avoid phishing or any possible scams. FireToken Official Team will NEVER ask you for any sensitive security questions or private keys to your wallets.

After signing up, please authenticate your email by clicking on the link provided through email to enable access. OUR EMAIL MIGHT GET SENT TO THE SPAM FOLDER, please check in the spam folder first if you do not see the email in your inbox.

- After email verification, navigate to FireToken back dashboard. You can select the STAKING tab on the left navigation menu.

- Select My Staking from the submenu.

- Enter your Ethereum wallet address here, and click the add button.

**Enter Staking Address**

**MY STAKING WALLETS**

Wallet Address	Wallet Date	Action
No Data Found!!		

**ACTIVE STAKING STATICS**

---

## STEP 2

After adding your wallet into our staking system you will see the staking wallet addresses displayed below. Click on the blue colored bar “Stake My fire token”

### Enter Staking Address

0x8e01aD338c82Edd5C4c01aC4039586420f

Add

Stake My fire token

### MY STAKING WALLETS

Wallet Address	Wallet Date	Action
0x8e01aD338c82Edd5C4c01aC4039586420f	Jul 19, 2018	

Select the wallet address and the amount of FireTokens you would like to activate the staking function and click “STAKE”

### STAKE MY FIRETOKEN

To Firetoken Address : 0x8e01aD338c82Edd5C4c01aC4039586420f

Enter Firetoken Qty :

STAKE

Your Firetoken Wallet Balance

**Your FireTokens are now being staked.** Your staking reward will be distributed automatically. You will also get the equivalent amount of **FirePower** points in conjunction with your staked **FireTokens** amount. Your FirePower points can be use for voting, and expires after 7 days.
