# FIRETOKEN Live Trading Tutorial

Welcome to FireToken community,

This tutorial will provide the necessary explanations of our LIVE TRADING voting function to all new and existing members.

LIVE TRADING session is enabled during a pre-set time, we will announce the time and the exchange to our members prior to our live trading sessions.

Members can find the LIVE VOTING function on the LEFT NAVIGATION bar when it is enabled, as showed in image below.
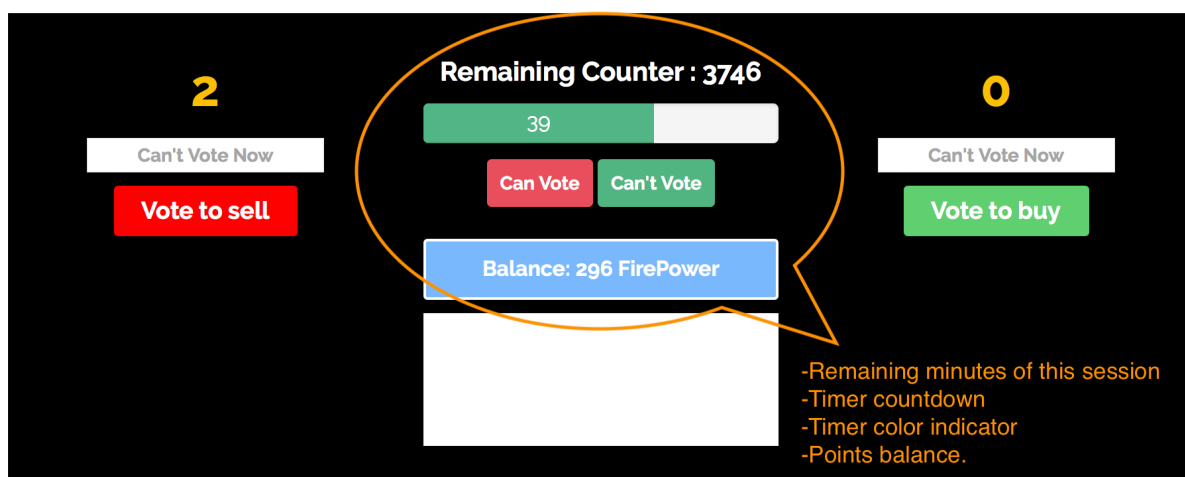

The exchange and the trading pairs can be viewed on the top of the chart. Users can also see other trading pairs on multiple exchanges, as our charts is powered by TradingView.

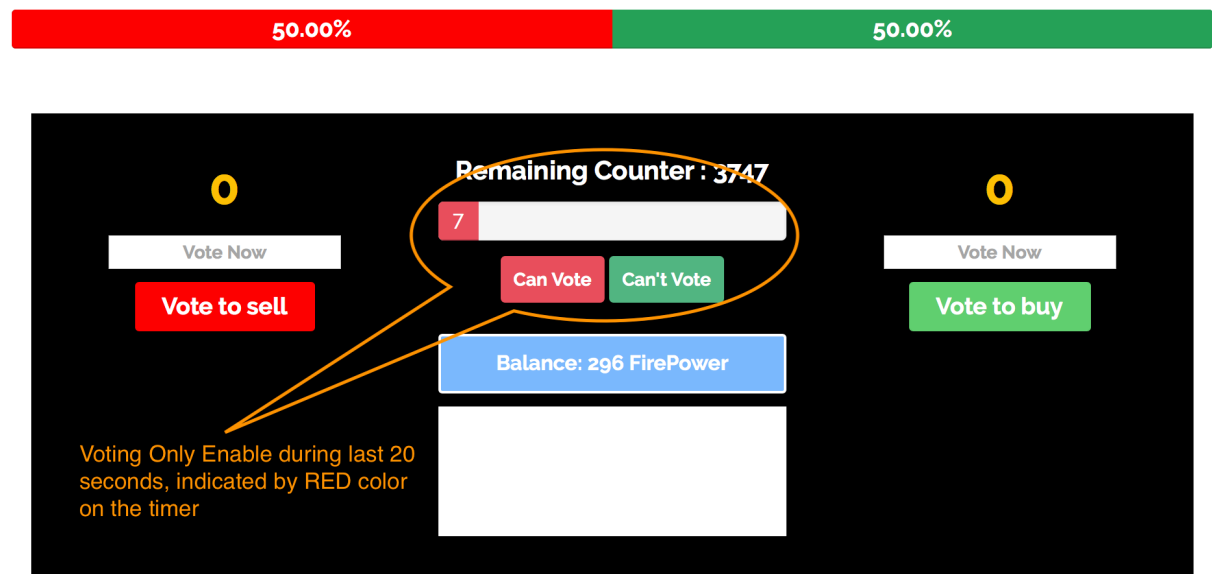

Our Total Vote Strength Indicator can be seen right below the chart, and will display TWO type of Vote Strength.

1) The overall strength of the session.
2) The strength of the current one minute vote.

You will see the indicator adjust at the 20 seconds mark on the timer.

You can only vote during the last 20 seconds of the timer, as indicated by the color of the timer.

50.00%	50.00%

Enter the amount of votes you would like to use for this minute, you may use any amount, but be sure to keep track of your balance shows in the middle box above the announcement screen.

50.00%	50.00%

the strength indicator and the number above your voting box will show how many votes were used and what is the strength percentage in comparison to the opposite vote.

Our live voting indicator will allows traders to gauge the market while they are participating in the exchange and decide on the right time to put in their positions.

Those who already set their positions can also use live trading votes to reaffirm their positions in comparison with the group and adjust if necessary.

We will add more features and continue to perfect our voting system to better adjust the amount of users as our community grows, PRIVATE live trading is also an option for future hosts.
